nowadays applied work in business and economics requires a solid understanding of econometric methods to support decision making combining a solid exposition of econometric methods with an application oriented approach this rigorous textbook provides students with a working understanding and hands on experience of current econometrics taking a learning by doing approach it covers basic econometric methods statistics simple and multiple regression nonlinear regression maximum likelihood and generalized method of moments and addresses the creative process of model building with due attention to diagnostic testing and model improvement its last part is devoted to two major application areas the econometrics of choice data logit and probit multinomial and ordered choice truncated and censored data and duration data and the econometrics of time series data univariate time series trends volatility vector autoregressions and a brief discussion of sur models panel data and simultaneous equations real world text examples and practical exercise questions stimulate active learning and show how econometrics can solve practical

questions in modern business and economic management focuses on the core of econometrics regression and covers two major advanced topics choice data with applications in marketing and micro economics and time series data with applications in finance and macro economics learning support features include concise manageable sections of text frequent cross references to related and background material summaries computational schemes keyword lists suggested further reading exercise sets and online data sets and solutions derivations and theory exercises are clearly marked for students in advanced courses this textbook is perfect for advanced undergraduate students new graduate students and applied researchers in econometrics business and economics and for researchers in other fields that draw on modern applied econometrics

the tensorial nature of a quantity permits us to formulate transformation rules for its components under a change of basis these rules are relatively simple and easily grasped by any engineering student familiar with matrix operators in linear algebra more complex problems arise when one considers the tensor fields that describe continuum bodies in this case general curvilinear coordinates become necessary the principal basis of a curvilinear system is constructed as a set of vectors tangent to the coordinate lines another basis called the dual basis is also constructed in a special manner the existence of these two bases is responsible for the mysterious covariant and contravariant terminology encountered in tensor discussions a tensor field is a tensor valued function of position in space the use of tensor fields allows us to present physical laws in a clear compact form a byproduct is a set of simple and clear rules for the representation of vector differential operators such as gradient divergence and laplacian in curvilinear coordinate systems this book is a clear concise and self contained treatment of tensors tensor fields and their applications the book contains practically all the material on tensors needed for applications it shows how this material is applied in mechanics covering the foundations of the linear theories of elasticity and elastic shells the main results are all presented in the first four chapters the remainder of the book shows how one can apply these results to differential geometry and the study of various types of objects in continuum mechanics such as elastic bodies plates and shells each chapter of this new edition is supplied with exercises and problems most with solutions hints or answers to help the reader progress an extended appendix serves as a handbook style summary of all important formulas contained in the book

this book collects high quality research papers presented at the international conference on computing applications in electrical electronics engineering held at rajkiya engineering college sonbhadra india on august 30 31 2019 it provides novel contributions in computational intelligence together with valuable reference material for future research the topics covered include big data analytics iot and smart infrastructures machine learning artificial intelligence and deep learning crowd sourcing and social intelligence natural language processing business intelligence high performance computing wireless mobile and green communications ad hoc sensor and mesh networks sdn and network virtualization cognitive systems swarm intelligence human computer interaction network and information security intelligent control soft computing networked control systems renewable energy sources and technologies biomedical signal processing pattern recognition and object tracking and sensor devices and applications
